

I’m motivated to design, build and maintain high-quality software, improve the codebase through continuous refactoring, share knowledge with my teammates, lead teams and projects, and keep improving my skills. I’m looking for opportunities to work across the stack and participate in product and business decisions.

Work Experience

Distillery | Sr. Software Developer. July 2021 - Present

Nearshore Development Company, Assigned to iCapitalNetwork, Fintech Startup based in NY.

- Work on iCapitalNetwork monolith, using Rails, Angular, and React, collaborating with a distributed team across NY, Portugal, and Mexico.

Apptegy | Tech lead / Backend Developer. Nov 2019 - July 2021

Ed-tech startup focused on K-12 education. Based in Little Rock AR USA.

- Shipped new functionality on Apptegy’s main application “Thrillshare” while tackling tech debt and building supporting services for our monolith.
- Helped meeting team goals as a team by coaching peers on best coding practices, architecture design, team collaboration, and being an effective middleman between product requirements and stakeholders.
- Advocate for improving our engineering best practices and implement: Continuous refactoring, usage of Design Patterns, testing (RSpec) guidelines, code reviews, pair programming, identify and pay off tech debt.
- Transition from waterfall to agile development.
- Helped to hire and retain talent for the company interviewing candidates at scale (around 20-30 in six months) keeping a high bar and improving the process on the go.
- Frontend work with Rails views, jQuery, Stimulus JS, and Vue.

Lead projects:

- Forms service, standalone outpost service following The Citadel service-oriented architecture pattern, built with Rails and JSON-API.
- Thrillshare’s Authorization layer with a dynamic permission set.

Ecaresoft | Tech Lead / Software Developer. Jun 2017 - Nov 2019

Health-tech SaaS company based in Monterrey with LATAM presence where I worked on the product Nimbo-X.

- Built new functionality and maintain Nimbo-x’s SPA (Ember) and API (Rails) while taking ownership of the backend codebase.
- Contribute to product decisions, support users, worked closely with customer support and stakeholders.
- Mentor multiple Interns and Jr. Devs, introducing them to the codebase, best practices, frameworks, and tools.

Lead projects:

- Inventory module MVP.
- Iterate inventory module from a centralized warehouse to multi-location warehouses.
- Tax and discounts modules.
- Migrate the app from single-product to multi-product architecture.

Rubixware | Jr. Software Developer. Feb 2016 - Jun 2017

Local consultancy company based in Monterrey, MX.

- Took the direction of the development and management from a restaurants management app built with Rails and React where I worked primarily in the next projects:
  - Authorization layer with a dynamic permission set.
  - Reservation module with hostess access, dashboards, and sales reports.
- Built CMS systems with Rails
- Built Static pages.
